

Press Release

Toulouse, 12 June 2024

Practical AI expertise, tangible results

During its participation at Eurosatory 2024 from 17 to 21 June, Magellium Artal Group will be presenting its latest innovations in artificial intelligence, a field in which it has a pragmatic, relevant and affordable vision.

Innovative, adaptable solutions

Our commitment to R&D enables us to offer a catalogue of advanced functions, including:

- **Rainet**, a turnkey neural network specialisation solution;
- **Aquila**, AI for detection and mapping.

Alongside these solutions, we are proud to present our technology for autonomous, permanent surveillance of large areas (5,000 km² and more), based on a **swarm of multi-sensors UAVs** (IMINT and COMINT). These UAVs are able to detect events and raise alerts autonomously, while ensuring a low cost of ownership.

An acknowledged reputation in Artificial Intelligence

With 8 years of proven experience in AI, Magellium Artal Group is a **key player in this field**. With over 25 years' expertise, we turn the possibilities offered by AI into **tangible results**, adapted to the specific needs of our customers. Our mission is to **make artificial intelligence accessible and relevant**, in order to effectively meet today's defence and security challenges.

About Magellium Artal Group

Magellium Artal Group is a medium-sized company with nearly 300 engineers and PhDs providing its customers with high added-value software, technical and scientific solutions for both civilian and military applications. With 10% of our turnover devoted to R&D, our commitment to innovation has shaped our reputation with major national, European and international players.

*We invite journalists to come and meet us and discover our innovations on **stand EF308** at Eurosatory 2024 from 17 to 21 June.*
