

LANCO tents tested in extreme weather conditions

Whether under the scorching sun of the United Arab Emirates, in Norwegian snowstorms, or during devastating hurricanes in Haiti, our tents have proven their robustness and reliability. To guarantee the exceptional performance of our products, we recently subjected our tents to extensive testing in a state-of-the-art Climatic Wind Tunnel in Nantes, France. The results are clear: our tents can withstand a snow load of up to 50 kg/m², and they can withstand gale-force winds of up to 100 km/h. Among our flagship models, the [AZE](#), Innova and [RDT](#) series stand out for their performance in extreme weather conditions.

At LANCO SAS, our top priority is the safety and comfort of our customers. Each tent is carefully designed, using high quality materials and state-of-the-art manufacturing techniques. Our team of experts is committed to providing products that meet the highest standards of durability and strength.
