FOR IMMEDIATE RELEASE

VEPTOS ARRIVES AT EUROSATORY 2026 WITH A PROVEN MODEL FOR LAND SYSTEMS MODERNIZATION

Proven military vehicle MRO, fleet inspection, and tactical upgrade capabilities

PARIS, FRANCE, JUNE 10, 2026: Veptos, the world's leading military vehicle modernization company, is pleased to announce its presence at Eurosatory 2026, where the company will present its capabilities across military vehicle MRO, tactical upgrades, and general legacy platform modernization. The booth will feature a striking Veptos Tactimod® M2A2 ODS Bradley IFV within a distinctive // modern exhibition.

As allied defense forces face aging fleets, rising readiness demands, and pressure to modernize faster, Veptos enters Eurosatory with a clear message: proven platforms still hold enormous value when they are properly inspected, correctly repaired, and upgraded with purpose. Veptos delivers that exact work with speed, discipline, and available production capacity at our newest facility.

Having inspected, delivered, and transformed nearly 14,000 vehicles across hundreds of fleets, Veptos has built a practical modernization model focused on extending service life and improving mission readiness at a significantly lower cost than new procurement replacement.

"Allied defense forces need speed, reliability, and real production output," said Richard Najarian, CEO of Veptos. "Veptos was built to deliver exactly that. We identify what is failing, correct what matters, modernize what improves performance, and return proven platforms to mission-ready condition at a fraction of the cost and time."

At Eurosatory, Veptos will highlight its integrated approach across complete MRO, JFI operational inspections, Tactimod® upgrade packages, tracked and wheeled vehicle modernization, armor integration, mobility improvements, electrical upgrades, fleet sustainment support, and we will debut Black Shepherd®.

Veptos' model is built around a simple operational truth: the fastest path to readiness is often not replacing an entire fleet. It is understanding the fleet already in service, correcting deficiencies, upgrading critical systems, and restoring combat value with speed and accountability. Built to outperform on today's battlefield.

The company's presence at Eurosatory marks a major step in its global expansion as Veptos continues building relationships with allied defense ministries, procurement agencies, fleet commanders, and strategic partners. The opening of Veptos Europe and the company's US expansion into Michigan continue to strengthen Veptos' position as a prime contractor for land systems modernization.
