

Ray Service Unveils the New EGIS Family Product Line at Eurosatory 2026

Paris, June 15, 2026 – Today at the Eurosatory 2026 international exhibition, Ray Service officially presented its new **EGIS Family** product line - a modern platform of robust display and computing systems designed for military vehicles and ground defense systems. The world premiere took place at the Ray Service booth, attended by distinguished guests from the defense industry and government sectors.

The ceremonial unveiling was also attended by the Minister of Defence of the Czech Republic, Jaromír Zůna, who joined company representatives to symbolically reveal the new product line and support its launch onto the global market.

"Eurosatory is where the major players of the global defense industry meet. This is exactly where we wanted to introduce a product that represents our years of experience in developing and manufacturing electronic systems for the most demanding applications. The EGIS Family opens a new chapter for Ray Service in the field of digital combat platforms and military electronics," stated representatives of Ray Service, Jakub Gabriel.

EGIS Family: One Platform, Three Configurations

The new EGIS Family product line was engineered for deployment in the harsh environments of modern military operations. The platform combines high computing power, resilience to extreme conditions, and seamless integration flexibility across various types of vehicles and systems.

The EGIS family consists of three core variants:

- **EGIS NG** – A high-performance computing system based on Intel architecture, designed for demanding command and control (C2) applications.
- **EGIS Lite** – An efficient ARM-based platform tailored for a wide range of vehicular and operational applications.
- **EGIS Expander** – An expansion display and control unit that enables the creation of multi-display operator workstations.

These systems were designed with a strong emphasis on longevity, high durability, and strict compliance with military standards regarding electromagnetic compatibility (EMC), power supply, and environmental resilience.

Czech Technology for the Global Defense Market

The introduction of the EGIS Family marks a significant milestone in the history of Ray Service. With this launch, the company is expanding its portfolio to include a proprietary product platform tailored for armored vehicle manufacturers, defense system integrators, and armed forces worldwide.

Eurosatory 2026 has thus served as the launchpad for the EGIS Family's entry into the international market. Initial feedback from industry experts, partners, and armed forces representatives has confirmed a strong interest in a solution that seamlessly merges robust

construction and open architecture with total readiness for the future requirements of the digital battlefield.

About Ray Service

Ray Service is one of the leading European suppliers of electrotechnical solutions for the defense, aerospace, and industrial sectors. The company specializes in the development and manufacture of cable harnesses, electronic systems, electromechanical assemblies, and comprehensive solutions for the most demanding applications in defense and security.
