PGM PRÉCISION LAUNCHES THE NEW PGM MINI HÉCATE II SNIPER RIFLE AT EUROSATORY

A NEXT-GENERATION RIFLE DESIGNED FOR EMERGING OPERATIONAL CHALLENGES

As theaters of operation evolve, with engagements taking place at increasingly greater distances, armed forces are looking for weapon systems capable of offering an optimal balance between range, accuracy, mobility, and terminal velocity. This new version of the PGM Mini Hécate II was developed specifically to meet these emerging needs.

The PGM Mini Hécate II is a next-generation, high-precision rifle designed to satisfy the most demanding operational requirements for intermediate-caliber weapon systems. Intended for snipers, this highly versatile platform provides maximum effectiveness in both very long-range anti-personnel engagements and light anti-materiel shooting.

Compatible with proven calibers such as the .338LM, as well as the new .375 Swiss P, the PGM Mini Hécate II is an evolutive multi-caliber platform designed to meet current and future operational challenges.

A NEW CHASSIS USING THE ARCA STANDARD TO MAXIMIZE ERGONOMICS.

Featuring a new chassis with an integrated ARCA rail that allows the bipod to be mounted along the entire length of the handguard, as well as an adjustable bolt-side folding stock, this lightweight, compact, and robust rifle offers the very best in ergonomics.
