

## Exhibitor press release | DataScouting | Eurosatory 2026

### DataScouting Brings AI-Powered OSINT to Eurosatory 2026

*MediaScouting OSINT Platform Makes International Debut at Hall 5a, Stand H402 (Hellenic Pavilion), Paris Nord Villepinte Exhibition Centre, 15–19 June 2026*

Greece, June 2026 - DataScouting will present MediaScouting OSINT at Eurosatory 2026 - a next-generation open-source intelligence platform designed for government, defense, and national security organizations operating in today's complex information environment.

#### AI-Powered OSINT for the Modern Information Battlespace

As the volume and velocity of open-source information grows, defense and security organizations face mounting pressure to maintain situational awareness, detect disinformation, track emerging threats, and support intelligence-led decision-making. MediaScouting OSINT addresses this challenge with a next-generation, fully secure platform purpose-built for government, defense, and national security operations.

- **Collect:** monitor a wide spectrum of media sources in a single operational environment - TV, radio, IP streams, podcasts, online news, social media, dark web, and print media;
- **Understand:** apply AI agents, speech-to-text, entity recognition, logo and facial recognition, and sentiment analysis to raw data streams;
- **Detect:** identify disinformation campaigns, hybrid threats, cognitive warfare activities, narrative shifts, and emerging risks in real time;
- **Act:** respond with real-time alerts, dynamic dashboards, and a 360° operational view, backed by 24/7 continuous coverage.

#### Advanced AI at the Core

MediaScouting OSINT integrates a suite of AI-driven technologies - including Large Language Models (LLMs), optical character recognition (OCR), speech recognition, sentiment analysis, entity, logo and facial recognition - to transform unstructured, multi-source data streams into actionable intelligence, automatically classified, prioritized, and contextualized in real time, 365/24/7.

The platform's modular, scalable architecture supports deployment on-premises and in air-gapped environments, making it suitable for national intelligence units, counter-terrorism agencies, crisis management centers, law enforcement agencies, and defense organizations with stringent security requirements.

#### Meet DataScouting at Eurosatory 2026

Visit DataScouting at Hall 5a, Stand H402 (Hellenic Pavilion) for a live demonstration of MediaScouting OSINT and DataScouting's AI Modules, 15-19 June. Opening hours: Monday-Thursday 9am-5pm; Friday 9am-3pm.

#### About DataScouting

DataScouting is a software innovation company with over a decade of experience delivering advanced OSINT solutions to government, defense and national security forces, law enforcement agencies, financial institutions and large enterprises. Its AI-powered platforms transform complex open-source streams (broadcast, online, social, dark web, print, and
