

## At Eurosatory 2026, MC2 Technologies will demonstrate how electronic warfare has become a decisive force multiplier.

The world is facing an **unprecedented escalation of hybrid conflicts**, where threats are no longer limited to theoretical scenarios; they are now a daily reality, from Ukraine to the Middle East.

In this context, Eurosatory 2026 serves as the platform where MC2 Technologies demonstrates that an innovative SME can become a key player in the defense sector. The company is a recognized specialist in the field of **electronic warfare**, particularly thanks to its **intelligent jamming solutions**. MC2 Technologies designs and manufactures cost-effective solutions in France that are already deployed by the Armed Forces, domestic security forces, and critical infrastructure operators. Its technologies don't just respond to threats, they anticipate them, by integrating **AI, machine learning, and unparalleled operational agility**.

Electromagnetic warfare (EMW) is no longer merely a component of **modern warfare**; it is its **foundation**, determining the ability to act and protect oneself. MC2 Technologies will showcase its essential solutions : the **BLAST** and **ILIAD** duo, intelligent, multi-mission integrated jammers designed to counter drone and RC-IED threats. The **NEROD NG** (New Generation) programmable jammer rifle. The **MAJES DFB6** and its antenna system, capable of instantly jamming enemy communications and drones without interfering with friendly systems ; and much more...

At Eurosatory 2026, MC2 Technologies is not presenting itself as a traditional manufacturer, but as a **company firmly focused on the challenges of electronic warfare**. **MC2 Technologies' agility** enhances the effectiveness of industrial prime contractors, creating an ecosystem in which every player plays a decisive role.

Its operational roots are reflected in its direct connection with end users. This proximity, combined with its **complete autonomy** from R&D through production, makes it an indispensable partner for armed forces that demand **performance, reliability, and strategic autonomy in the field of electronic warfare**.

*Visit them at EUROSATORY, Hall 5A, Booth H356.*
