

THERMO PROJECTS UKRAINE PRESENTS NEW MOBILE CLIMATE SYSTEMS AND VEHICLE HVAC SOLUTIONS AT EUROSATORY 2026

LLC Thermo Projects Ukraine (TPU), a Ukrainian manufacturer of climate systems for special and military vehicles, mobile shelters and containers, participates in Eurosatory 2026, where it presents its new products in the vehicle HVAC and mobile climate solutions fields.

The exhibition features two of the company's newest products: the THERMO GO portable air heater and the BOREY TENT 120 NG mobile air conditioner. As well as the SUMY 40 and ODESA 90 HVAC evaporators for armored vehicles, which are field-proven in Ukraine.

The THERMO GO is a highly mobile air heating system designed for easy logistics and rapid deployment wherever temporary heating is required. Built around a high-quality WEBASTO air heater manufactured in Germany, the system is integrated into a compact and rugged NATO-standard case, ensuring easy transportation and operation in remote locations.

Available in 2 kW and 4 kW versions, THERMO GO features an integrated fuel tank, autonomous operation of up to 30 hours, a digital temperature controller, and power supply options for both 12 V DC and 220 V AC. The solution is suitable for tents, shelters, containers and other temporary facilities where permanent heating infrastructure is unavailable. The portable heater has a low acoustic and visual signature, which is important for defence forces.

Another product is presented at the booth is the BOREY TENT 120 NG mobile air conditioner. The system provides cooling, heating and ventilation for tents, field hospitals, containers and other temporary facilities with volumes of up to 60 m³. The new generation features a modern compressor compatible with both R1234yf and R134a refrigerants, improved transportability, and compliance with European requirements confirmed by CE certification.

BOREY TENT 120 NG is a powerful system with 11 kW of cooling capacity and 12 kW of heating capacity. The system uses high-quality European components, which guarantee a high level of performance and reliability in demanding field conditions.

Both systems were developed to address the growing demand for mobile, rapidly deployable infrastructure supporting defence, security, rescue missions and humanitarian operations.

"Modern field operations require reliable climate control solutions that can be deployed quickly, easily transported, and operate in demanding conditions. Through products such as BOREY TENT 120 NG and Thermo Go, we combine mobility, efficiency and operational reliability," the company states.

About TPU

Thermo Projects Ukraine (TPU) is a Ukrainian manufacturer of climate systems for vehicles and mobile applications (shelters, tents and containers). Founded in 2005, the company specializes in the development and production of climate systems for vehicles, special-purpose machinery, tents and containers, as well as component selection and integration, custom-engineered solutions, and the distribution of leading global brands.
